1. EUDR Compliance Statement

Norwegian Timber and Wood Raw Materials

Norway has a long-established forestry sector governed by comprehensive legislation, sustainable forest management practices and industry-wide traceability systems.

We confirm that:

- Timber supplied originates from Norway and is harvested in accordance with applicable Norwegian legislation relating to property rights, forest management, environmental protection and labour requirements.
- Timber originates from forests managed under PEFC, FSC or equivalent certification schemes requiring independent audits, sustainable forest management and documented traceability.
- Harvested forest areas remain forest areas following harvesting, and requirements for regeneration and long-term forest productivity are upheld.
- Digital industry systems provide traceability from harvest area to industrial recipient, including the geolocation and supply chain information required to support EUDR compliance.
- Relevant information can be made available to support customers' Due Diligence Statements (DDS) under the EU Deforestation Regulation (EUDR).

Norwegian forestry combines strict legal requirements, mandatory regeneration obligations, independent certification and comprehensive digital traceability, providing a strong foundation for compliance with EUDR requirements and customer due diligence processes.

For further information regarding EUDR documentation and traceability data, please contact your sales representative.
